

Environmental Guidelines

At Messer, we are committed to the responsible use of natural resources, the development of clean technologies and the replacement of harmful substances with eco-friendly alternatives. We actively seek to minimize the environmental impact of our own operations and we strive to deliver technologies and gases that help you, our customers, minimize – or even eliminate – hazardous emissions.

Messer's environmental guidelines reflect this commitment. We will:

- determine the material impact of our business activity on the environment,
- reduce the undesirable impact of our products and services on the environment,
- support waste reduction and pollution prevention programs,
- provide operating principles, processes, procedures and resources for the implementation of these environmental guidelines, taking into consideration the best available technology,
- raise awareness among our employees about the importance to act in an environmentally friendly way, both at work and at home,
- comply with or exceed the requirements of existing environmental legislation,
- carry out environmental impact assessments before building new facilities or modifying existing ones,
- communicate openly and honestly with all stakeholders and neighbours, and
- minimize specific energy consumption and, wherever possible, reusing materials in an economically viable way.
